**From:**

**alpha** COMMUNICATIONS®

# VisitorVerifier™ is loaded with security and convenience features that are not found in more costly hard-wired video-intercom systems.

## Protect your residents and your family from unauthorized intruders for a mere fraction of the cost of lesser systems.

### Send a PinkNote™ Window:

Built into VisitorVerifier™ is the ability for residents and management to send PinkNote™ instant messages. This greatly enhances building communication and reduces missed or lost messages. For example, management can send a PinkNote™ to all building residents saying "Reminder: the elevator is being serviced this evening from 8PM to 11PM and will be out of service", or "the yearly BBQ will be next Wednesday at Noon in back of the Elm Building". Residents can send a PinkNote™ to management, as well as to other family members (within an apartment or suite), or to other residents. All PinkNotes™ are stored in a log file for future reference as needed.

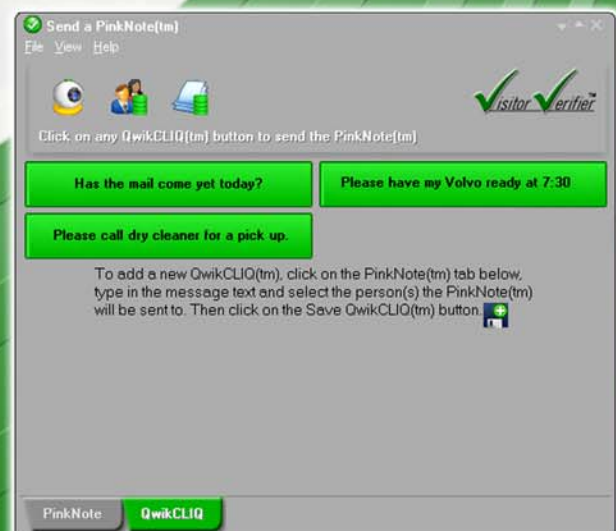

### PinkNote™ Received Window:

When a PinkNote™ is received you can see the date, time and sender (and an optional image of the sender) and the PinkNote™ . The image shown here would be typical of a resident sending a PinkNote™ to the parking garage attendant, requesting to have their car ready. The attendant will see the image of the sender, which avoids the possibility of giving their car to an unauthorized person, even when the attendent might not be familiar with all of the building residents.

### QwikCLIQ™ Window:

For PinkNotes™ that you may send on a repeat basis, you can create a QwikCLIQ™ button. The QwikCLIQ™ button allows you to send a specific PinkNote™ to one or more recipients, with a single click on the QwikCLIQ™ button. You can create virtually any number of QwikCLIQs™, for quick and accurate building messaging.

## VisitorVerifier™ Pop-Up Window:

When a visitor places an entrance call, this is the window that will automatically pop-up on your PC screen. You can be logged onto VisitorVerifier™ through your building's network or over the Internet. This enables you to see your visitors no matter where you are at the time of their visit.

You can see the day/date, time, camera location and the 'Live Video' of the visitor. You can switch between 'Live Video' and the 'Initial Image' that was captured when the visitor placed their call. If you are away from your screen, the images of any missed visitors will display for your convenience. The 'Initial Image' will automatically be placed in the Visitor Log for future viewing if needed. The Pop-Up Window also allows you quick access to other VisitorVerifier™ features such as Sending a PinkNote™, QwikCAM™, Visitor Log™ and PinkNote™ logs.

## Visitor Log Window:
Each resident can easily view (or print) their visitors, logged within any date range. Building management can view (or print) these logs as well. This is especially important when there has been a building incident, and you need to have an image of all of the visitors to the building for use by law enforcement or others.

## QwikCAM™ Window:
VisitorVerifier™ allows you to connect remote CCTV cameras for viewing by building residents and/or management, locally or over the Internet. This is an important security and convenience feature. For example, you can watch your daughter safely get into her car, in the parking lot. You can keep an eye on the stairwells, hallways, or watch your visitors as they enter the lobby elevator. You can watch the laundry room to see when a machine might become available. Perhaps you wish to see if there is a free tennis court?
