Rev. 1 - 11/1998

NC364 Telephone Interface

ARCHITECTS' AND ENGINEERS' SPECIFICATIONS

The Telephone Interface Equipment shall be Alpha Communications®/Tektone NC364 or equivalent equipment. The Telephone Interface shall install in-line with an approved Master Station (NC303) or approved equivalent, and shall provide access to the Master Stations audio path and monitor all data communications between CPE and Master Station's audio and data communications path in order to provide an audio path between a remote station and an external analog telephone. The Telephone Interface shall communicate with the CPE to perform remote functioning of the Nurse Call System in conjunction with a telephone. The Master Station shall echo the operations performed via the Telephone Interface and display these functions on its video monitor (NC313 with NC314A). Operation of the Telephone Interface shall be interceded by the Master Station when necessary. The Telephone Interface, in conjunction with a telephone, shall be able to place a call to a desired remote station, answer the highest priority call on the system, page a nurse, page all stations, set nurse request, aide request, and stat for any remote station. The Telephone Interface shall also dial a remote analog telephone if calls placed on the system have gone unanswered.

Contractor shall observe all local and national electrical and building codes.

NC364 Telephone Interface

The Alpha Communication® NC364 Telephone Interface provides an input for an analog telephone line through which an operator may access the NC300 Nurse Call System remotely, to perform normal functions for patients. Voice steering is provided to assist the operator in providing these functions in the absence of a display.

The Telephone Interface has ten (10) programmable access codes available to provide some security to the system. These access codes are readily programmed and deleted using any remote touch tone telephone. The telephone Interface has the ability to place a call to any telephone if a call goes unanswered on the Nurse Call System. This function occurs automatically after a phone number has been programmed into the system. Any number up to fifteen characters may be programmed to be dialed by the telephone interface.

FEATURES

- May be located near Master Station or CPE for ease of installation
- Connects in-line with Master Station
- May be used without a Master Station
- Ten programmable access codes
- Programmable dial out features
- Voice steering for menu selections
- Master Station override, places calls on hold
- Interfaces with any analog telephone or PBX System

SPECIFICATIONS

- Dimensions:** Height: 11.75" (298mm)
Width: 11.50" (292mm)
Depth: 3.60" (92mm)
- Construction:** #19 Gauge Steel
- Finish:** Matte Brown
- Wiring:** DB9 (NC303 Extension Cable, CT364)

REQUIRED COMPONENTS

- | | |
|------------------------------|------------------------------|
| Analog Phone Line | Dedicated Phone Line |
| IR300 Series | Stations |
| NC350C/NC350CP Series | Central Processing Equipment |
