

**EL500
Microprocessor
Module**

ARCHITECTS' AND ENGINEERS' SPECIFICATIONS

The Microprocessor Module(s) shall be Alpha Communications®/Golmar EL500, or approved equal. EL500 shall be mounted inside the appropriate intercom or video door entry station.

The EL500 module(s) shall contain the system software and shall also store all of the calling and other data that is programmed into the system.

The EL500 module(s) shall have positive screw terminal and plug-in connectors.

Contractor shall observe all local and national electrical and building codes.

EL500 Microprocessor Module

The Alpha Communications®/Golmar EL500 Microprocessor Module is a compact, assembly that mounts into a variety of intercom and/or video door entry stations.

Typically, the EL500 contains the system software and programming of all of the door stations and devices on the system.

Not only does the EL500 control the system by means of the software built-in, it stores all of the calling and other data that is programmed into the system functions.

FEATURES

- Compact design mounts behind door entry station
- Positive screw terminal and plug-in connectors
- Works with a variety of door entry stations

Due to continuous product improvement, all colors, sizes, materials, finishes and specifications are subject to change without notice.
