wireless emergency call

Tek-CARE® 500

The latest in wireless emergency call systems—new from TekTone®! **Tek-CARE®500** provides senior living facilities with the most advanced security and safety available, giving your clients the peace of mind and independence they deserve.

Tek-CARE®500 includes a complete selection of wireless call transmitters—including residents' pendants, emergency switches, check-in switches, smoke detectors, door and window monitors, and motion detectors—powered by batteries that last more than one year. Plus, all transmitters are supervised, so you always know your system is working.

Tek-CARE®500's master station is the core of the system, keeping track of all transmitters and calls, and sending those calls to staff pagers (when used with the Tek-PAGING® system). The system also maintains resident information—including photos, medical information, and contact information for relatives and physicians. All information is clearly and logically displayed on the flat-panel monitor, and calls can be automatically transmitted via phone to a central monitoring facility.

Residents wear water-resistant pendants around the neck, on the belt, or on the wrist, allowing them the freedom to roam throughout your facility or campus knowing that help is always just a button press away. Place wireless emergency switches in baths and bedrooms for additional call locations.

The motion detector can be used as either a call alarm or an automatic check-in device. For example, choose the time period when movement is registered as a morning check-in, so that you're sure residents are up and about—without disturbing their privacy.

TekTone® has designed Tek-CARE®500 to work as a system. Its NC501 Master Station Computer has been carefully designed and matched to work with Tek-CARE®500 wireless and wired peripherals. TekTone® will not warrant or support components of Tek-CARE®500 that are purchased separately unless the components are add-ons to previously sold systems. TekTone® will also not warrant or support a system that is a mix of TekTone® and Non-TekTone® parts, unless prior permission has been obtained. A site survey must be performed and submitted before ordering a Tek-CARE®500 system. In order to track our systems and to inform facilities of software upgrades, full site information (site name, address and phone number) will be required when ordering. Site information and NC501 warranty numbers will also be required when requesting technical support.
