

THE SMARTEST VIDEO INTERCOM... WITHOUT THE INTERCOM

Visitor Access & Access Control Solution
Without the Costly Hardware or Installation

What is the AlphaTouch® Flex?

AlphaTouch® Flex, a cutting-edge virtual video intercom system that offers flexibility, affordability, and top-notch security. By eliminating the need for physical door stations, it provides a modern access experience at a low cost. Simply use the Flex Code to turn smart phones into a fully functional, 2-way video intercom system for any multi-unit building.

Why Choose The Flex?

The AlphaTouch® Flex offers a low-cost and easy to install, smart video-intercom solution for both new and existing multi-unit buildings. The Flex is especially suited in applications in which an older, analog intercom is no longer working or in which a building wants to add video-intercom without having to remove or replace the older, outdated equipment.

How Does it Work?

Scan the Flex Code

The visitor scans the Flex Code and opens the resulting web page. The Flex panel appears on their phone.

Call the Tenant

The visitor locates their desired party either through the directory or by using the configured speed dial buttons and places the call.

Verify the Visitor

Using the AlphaTouch app, talk to the visitor, verify their identity and allow them into the building.
